Contents

Preface 11

1 Identifying Causal Effects 1
- 1.1 Introduction 1
- 1.2 A Framework for Causal Analysis 2
  - 1.2.1 Potential Outcomes 3
  - 1.2.2 The Assignment Mechanism 5
- 1.3 Treatment Assignment and The Stable Unit Treatment Value Assumption 6
  - 1.3.1 SUTVA 6
  - 1.3.2 More on Treatment 7
- 1.4 Estimands of Interest 9
  - 1.4.1 Average Causal Effects 9
  - 1.4.2 A Note on Jargon: Estimands, Estimators, Estimates and Parameters 12
- 1.5 What We Mean When We Talk About "Identification" 13

2 Ignorable Treatment Assignment: Experiments and Random Assignment 17
- 2.1 Introduction 17
- 2.2 Identification with Random Assignment 18
- 2.3 Estimation with Unconditional Unconfoundedness 20
  - 2.3.1 Unconditional Unconfoundedness: Comparison of Means 20
  - 2.3.2 Regression Analysis 20
  - 2.3.3 Regression with Unconditional Unconfoundedness: Benfits and Extensions 21
- 2.4 A Number of Approaches to Inference 23
  - 2.4.1 Design-Based versus Sampling-Based Uncertainty 23
  - 2.4.2 Randomization Inference 25
  - 2.4.3 Regression-based Inference in Experimental Design 26
  - 2.4.4 The Bootstrap 28
  - 2.4.5 What Type of Inference Procedures Should be Used? 30
- 2.5 Experimental Design and Other Considerations 31
  - 2.5.1 Alternative Assignment Mechanisms 31
  - 2.5.2 Practical Issues in Experimental Design 34
  - 2.5.3 Limits in Experimental Settings 35
  - 2.5.4 Ethical Considerations 36

Exercises 38

3 As Good as Random?: Constructing a Counterfactual with Observables 41
3.1 Introduction 41
3.2 Matching as an Identification Strategy 43
3.2.1 A General Overview of Matching Estimators 44
3.2.2 Exact Matching 45
3.2.3 Other Forms of Covariate Matching 45
3.2.4 Matching with The Propensity Score 46
3.2.5 The Technology of Matching 48
3.2.6 Practical Considerations 51
3.2.7 Bias in Matching 55
3.2.8 Inference 57
3.3 Weighting as an Identification Strategy 58
3.4 Regression as an Identification Strategy 60
3.4.1 Understanding Regression as an Estimation Strategy 60
3.4.2 Combining the Above Techniques: Double-Robustness 63
3.5 The Credibility of Identifying Variation from Conditional Unconfoundedness 64
Exercises 67

4 Difference-in-Differences, Synthetic Controls and their Derivatives 69
4.1 Introduction 69
4.2 The Canonical Difference-in-Differences Design 71
4.2.1 Notation, Assumptions and Estimands of Interest 72
4.2.2 Estimation and the Two-Way Fixed Effect Model 75
4.2.3 Inference in Difference-in-Differences Designs 80
4.3 Generalisations of the 2×2 Design 84
4.3.1 Time-Varying Treatment 85
4.3.2 Diagnosing Estimation Issues 86
4.3.3 Solutions and Some New Estimators 90
4.4 Dynamics and Panel Event-Study Designs 94
4.4.1 The Panel Event Study Model 96
4.4.2 Heterogeneous Treatment Effects and Event Study Models 101
4.5 Other Extensions to Difference-in-Differences Methods 105
4.5.1 Difference-in-Difference-in-Differences 105
4.5.2 Continuous Treatment Variables 106
4.5.3 Inter-temporal Treatment Effects and 'Non-Absorbing' Treatments 108
4.5.4 Difference-in-differences with unbalanced panels 108
4.5.5 Loosening the Parallel Trends Assumption 109
4.6 Synthetic Control and Related Methods 110
4.6.1 "Classic" Synthetic Control 110
4.6.2 Synthetic Difference-in-Differences 119
Exercises 122

5 Estimation with Local Manipulations I: Instrumental Variables and LATE 127
5.1 Introduction 127
5.2 Instrumental Variables and the Local Average Treatment Effect 129
5.2.1 A Broader Causal Framework 129
5.2.2 Instrumental Variable Assumptions and the Rubin Causal Model 130
5.2.3 The Local Average Treatment Effect and Other New Estimands 134
5.2.4 Estimation and Inference 137
5.3 Understanding the Composition of the LATE 141
5.3.1 LATE and the compliant subpopulation 141
5.3.2 What can we say about the compliers? 143
5.3.3 LATE with one-sided non-compliance 146
5.3.4 Discussions of the (Dis-)Utility of the LATE 147
5.4 Covariates, Multiple IVs and Continuous IVs 149
5.4.1 Treatments with Multiple Levels 149
5.4.2 Instruments with Multiple Levels 151
5.4.3 What Changes if we add Controls? 152
5.4.4 Multiple IVs 154
5.5 Testing IV Assumptions 156
5.5.1 First Stage 156
5.5.2 Independence 159
5.5.3 The Exclusion Restriction 162
5.5.4 Monotonicity 163
Exercises 164

6 Estimation with Local Manipulations II: Regression Discontinuity Designs 169
6.1 Introduction 169
6.2 Identification and Regression Discontinuity Designs 170
6.2.1 The Regression Discontinuity Design and the Evaluation Problem 170
6.2.2 Sharp RDDs 174
6.2.3 Fuzzy RDDs 175
6.3 Visualisation, Estimation and Inference with RD 178
6.3.1 Graphical Representations 178
6.3.2 Estimating Regression Discontinuity Effects 180
6.3.3 Inference in Regression Discontinuity Designs 192
6.3.4 What Changes in Fuzzy Designs? 195
6.4 Diagnostic Tests in RDDs 196
6.4.1 Balance Tests and Placebo Tests 196
6.4.2 Running Variable Density and Direct Tests of Manipulation 197
6.4.3 Other Tests in Regression Discontinuity Designs 200
6.5 Extensions to the Standard Regression Discontinuity Design 201
6.5.1 A Local Randomisation Approach 201
6.5.2 Multi-Dimensional RDDs 203
6.5.3 Discrete Running Variables 206
6.5.4 Regression Discontinuity with Covariates 207
6.6 Regression Kink Designs 208

Exercises 211

7 Testing, Testing: Hypothesis Testing in (Quasi-)Experimental Designs 215
7.1 Introduction 215
7.2 Frequentist Hypothesis Testing and Error Rates 216
7.2.1 The Size of a Test 216
7.2.2 The Power of a Test 217
7.3 Multiple Hypothesis Testing 225
7.3.1 Multiple Hypothesis Testing and Error Rates 225
7.3.2 Multiple Hypothesis Testing Correction Methods 226
7.3.3 Reducing the Dimensionality of the Problem by Using Indexes 232
7.4 Pre-committing Analyses: Pre-registration, Pre-Analysis Plans and Registered Reports 233
7.4.1 "p-hacking" and Publication Bias 233
7.4.2 Pre-Registration and Pre-Analysis Plans 236
7.4.3 Registered Report 238
7.4.4 Observational Analyses 238
Exercises 240

8 Beyond Average Treatment Effects and Beyond the Population Under Study... 243
8.1 Introduction 243
8.2 Heterogeneity and Quantile Treatment Effects 244
8.2.1 Quantile Treatment Effects 245
8.2.2 Estimation and Inference for Quantile Treatment Effects 246
8.3 Relaxing SUTVA 253
8.3.1 A Framework without SUTVA 254
8.3.2 Strategies for Estimation and Inference 256
8.4 Treatment Effects and External Validity 260
8.4.1 Understanding External Validity 261
8.4.2 Extrapolating Local Treatment Effects within a Specific Setting 262
8.4.3 Extrapolating Out of Sample 266
8.4.4 Related Points 267
8.5 Sorting into Treatment and the Marginal Treatment Effects 268
8.5.1 The Roy Model 268
8.5.2 "Marginal Treatment Effects" and Other Relevant Quantities 269
Exercises 277

9 Machine Learning 281
9.1 An Introduction 282
9.1.1 The Logic Behind Machine Learning 282
9.1.2 Key Considerations for Application to Economics 284
9.1.3 New Points of Focus 285
9.2 Some Key Methods 288
9.2.1 Regularised Regression and Related Methods 288

9.2.2 Regression Trees and Forests 292
9.3 Machine Learning and Causality: Getting at Identification 296
9.3.1 An Illustration of the Idea: Post Double Selection Lasso 296
9.3.2 Double/Debiased Machine Learning 297
9.3.3 Difference-in-differences and Related Settings 302
9.3.4 ML with Instrumental Variables 305
9.4 Machine Learning and Causality: Understanding Heterogeneity 307
9.4.1 Causal Trees and Causal Forests 308
9.4.2 Meta-Learners 310
9.5 Active Areas of Work and Other Themes 312
Exercises 314

Notes 316
